## Topflor\* Hardy Mum Recommendations

Topflor Plant Growth Regulator has proven over the past few years to be a superior choice to using B-Nine® when regulating garden mums.

- B-Nine must remain wet on the leaf for long periods of time and during summer production this is difficult to achieve
- Topflor is active and in the plant in 30 minutes or less
- Topflor is more active on mums at much lower rates
  - 1 ppm Topflor = 750 ppm B-Nine
- Topflor cost about 75% less than B-Nine
  - 1 ppm Topflor = \$.12 cents vs. 750 ppm B-Nine = \$.62
- Topflor does not delay flowering
  - Mums will come in on schedule to meet customer demand
- Topflor has shown a dark green foliar response to regulation which is equated to better plant health by the consumer
- Topflor has a 12-hour REI vs. B-Nine at 24 hours

### Topflor Garden Mum Rates

<b>Compact Varieties</b>	2 ppm Topflor, 1 – 2 applications	vs.	1,500 ppm, B-Nine
<b>Medium Vigor Varieties</b>	3 ppm Topflor, 1 – 2 applications	vs.	2,250 ppm, B-Nine
<b>Vigorous Varieties</b>	4 ppm Topflor, 1 – 2 applications	vs.	3,000 ppm, B-Nine
