

Habitat[®]

Aquatic Herbicide

Say goodbye to emergent weeds.

- Long-term control
- Broad spectrum control
- Breaks down quickly

General Use Guide*

Broadcast	Spot Treatment
64 - 96 fluid oz/acre	0.5% - 5% solution

*Visit with a SePRO Technical Specialist for information, rates assume < 5 foot average depth

Application Tips

Habitat is labeled for application in a wide range of waterways, including lakes, rivers, streams, ponds, seeps, drainage ditches, canals, reservoirs, swamps, bogs, marshes, estuaries, marine sites, bays, brackish water, transitional areas between terrestrial and aquatic sites, and seasonal wet areas.

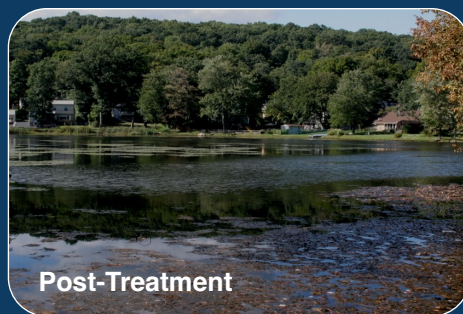

For maximum effectiveness, Habitat should be applied to weeds that are growing vigorously, using a spray solution that includes a surfactant. It may be applied selectively, using a low-volume direct application technique, or widely, using a broadcast technique involving ground equipment, watercraft, or helicopter.

Features:

- Targets shoreline grasses, floating weeds, & brush species
- Absorption takes place through roots & foliage
- Should be applied to emergent foliage above water's surface
- Custom Rx's from SePRO Technical Specialist always available
