

# EutroSORB<sup>®</sup> WC

## Water Column Phosphorus Inactivator

The following are tank-mix compatibility guidelines for EutroSORB WC, as the pH of another product can have a negative impact when mixed with EutroSORB WC. Another factor that could play a role in tank-mix compatibility is the source water that is used for dilution. A jar test is recommended to confirm compatibility. Make sure spray equipment and tanks are rinsed well prior to use, as residuals from non-compatible products will also have a negative effect on compatibility. Please contact your SePRO Technical Specialist with any questions.
