

Algae & Water Quality Management

For Irrigated and Non-Irrigated Ponds

Use this simple 3-step process to effectively eliminate and manage algae in your ponds.

1 Curative Treatment

Captain® XTR

Rate: 2.5 - 5 gal/A *

Application Tips:

- Dilute in water and use high pressure spray to break up algae mats in the affected areas.

Important: If algae covers most of the pond, treat no more than 1/3 of the surface at a time.

2 Post-Curative Follow-up (3-7 days after step 1)

EutroSORB® WC

Rate: 1.25 gal/A

- Follow up with 80 oz/A after 30 days

Objective:

- Binds phosphorus to improve water quality.

▶ **Captain® XTR**
Fast-acting, broad-spectrum algaecide

▶ **EutroSORB® WC**
Targets nutrient reduction

▶ **SeClear®**
Provides both algae control and nutrient management

▶ **AquaShade®**
Easy-to-use pond dye controls submerged weeds and algae

3 Ongoing Maintenance (2 weeks after step 2)

SeClear®

Rate: 5 gal/A **

Frequency: Every 2-4 weeks

Objective:

- Dual-action algaecide and phosphorus binder to keep water clear.

AND

AquaShade®

Rate: 1 gal/A **

Frequency: Monthly

Objective:

- Pond dye to reduce light penetration and suppress algae.

*Re-apply Captain® XTR if algae levels remain high 2 weeks after the final treatment

**Assumes 4 foot average depth.
